

SETUP GUIDE

Setup & Event Readiness

A practical checklist for the printed tube, Tube Light, assembly tape, optional insert, and event-day use.

Before the event

- Confirm the correct quantity and heights arrived.
- Confirm artwork and print direction match the approved proof.
- If using Tube Lights, have 3 AAA batteries available for each light. Batteries are not included.
- Keep assembly tape and any optional inserts organized by size.
- For a large event, assemble and test a small representative group before the full room setup.

iLLUMiTUBES Tube Light

The Tube Light is an \$8 optional light that uses 3 AAA batteries and is not rechargeable. It is intended to run through a normal event. Extra or replacement remotes are available for \$4 each.

Assembly tape

Use the specified double-sided tape to form the printed wrap cleanly at the seam. Extra tape is available for \$6 per roll.

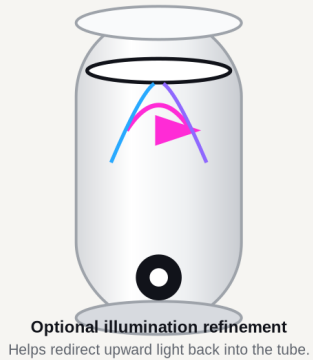

Reflector + Stability Insert

Use a maximum of one 3/16-inch white foamcore insert per tube. Choose one use only: top Reflector Insert or bottom Stability Insert. Do not use both in the same tube because assembly becomes unnecessarily difficult.

One insert. Two possible uses.

Use either a top Reflector Insert or a bottom Stability Insert. Do not use both in the same tube.

Top Reflector Insert

Bottom Stability Insert

One insert maximum per tube - 3/16-inch white foamcore

Event-day sequence

- Stage tubes, lights, batteries, tape, and inserts by table or area.
- Assemble consistently so seams face the intended direction.
- Place lights and activate them shortly before the event when practical.
- Walk the room and check alignment, sightlines, illumination, and stability.
- Keep a few spare batteries and basic setup supplies accessible during load-in.
